

## Hold-Up 1.6

Users manual for the Basic and Pro versions

### Personal finance manager software for Mac by Pierre-Olivier Latour & Didier Larue

Hold-Up is a simple and powerful software to manage your personal bank accounts.

Even if you have never use your computer to manage your personal finance, now you can do it easily!

## Table of contents

Introduction	3
Hold-Up interface	4
Creating and protecting accounts	8
Creating and editing transactions	9
Editing multiple transactions	10
Scheduling transactions	11
Creating filters	13
Printing	15
Importing and exporting transactions	16
Preferences	18

## Introduction

### Required configuration :

- 800x600 256 colors screen
- 32 Mb of RAM
- 10 Mb of free hard-drive space
- MacOS 8.5 or later, or MacOS X Final (for the Carbon version of Hold-Up)

### Installation :

Simply copy the Hold-Up folder anywhere on your hard-drive.

Then launch the application: since it's the first launch, you need to enter your personal serial number. Enter it carefully (respect lowercase / uppercase characters), then click on «OK». Hold-Up is now ready for use.

### Contact :

If you have any question regarding Hold-Up (functionalities, technical support...), send us an e-mail to: [hold\\_up@mac.com](mailto:hold_up@mac.com)

### Internet web site :

Make sure you visit our web site: <http://www.hold-up.fr.st>

You will find there the latest version of Hold-Up, the F.A.Qs, some useful tips & tricks...

### Thanks to :

Main betatesters of Hold-Up (Alexandre NEDELEC, Stéphan Obadia, Gilles Pouëssel) and all the others! Vella Bruno (<http://www.pyxart.it>) for the Italian translation and Stéphane Rosset for the German translation.

### DISCLAIMER :

Hold-Up authors makes no warranty of any kind with regard to this material, including, but not limited to, implied warranties of merchantability and fitness for a particular purpose. Hold-Up authors shall not be liable for errors contained herein or for incidental consequential damages in connection with the furnishing, performance, or use of this material.

## Hold-Up interface

### One single window, two lists and one button...

Using a personal finance manager software has never been so easy.

Diagram illustrating the Hold-Up interface components:

- Display info of the selected account / filter**: Points to the account information area.
- Contextual button new transaction / print**: Points to the button with a pencil icon.
- Account / filter list**: Points to the list of accounts and filters on the left.
- Search field**: Points to the search input field.
- Transaction list**: Points to the table of transactions.
- Information area**: Points to the summary text at the bottom of the transaction list.
- Note icon**: Points to the information icon (i) in the transaction list.
- Warning mark**: Points to the red circle icon in the transaction list.
- Reconciled checkbox**: Points to the checkbox in the transaction list.

The interface shows a window titled "Hold-Up" with the following data:

**State Bank • G-123456**  
**Balance: 33 140.00 \$ / 68 140.00 \$**

**Account / filter list:**

- Family account
- Kid account
- Items not checked
- July expenses
- July incomes
- Year transactions

**Transaction list:**

	Date	Description	Category	Amount
<input checked="" type="checkbox"/>	1/01/01	Home insurance		-2 000.00 \$
<input checked="" type="checkbox"/>	1/01/01	Home payment		-4 000.00 \$
<input checked="" type="checkbox"/>	1/01/01	Salary		5 000.00 \$
<input checked="" type="checkbox"/>	1/02/01	Salary		5 000.00 \$
<input checked="" type="checkbox"/>	5/02/01	Shopping		-500.00 \$
<input checked="" type="checkbox"/>	1/03/01	Salary		5 000.00 \$
<input checked="" type="checkbox"/>	21/03/01	Turkish restaurant		-200.00 \$
<input checked="" type="checkbox"/>	1/04/01	Salary		5 000.00 \$
<input checked="" type="checkbox"/>	20/04/01	Shopping (CDs)		-210.00 \$
<input checked="" type="checkbox"/>	1/05/01	Salary		5 000.00 \$
<input checked="" type="checkbox"/>	14/05/01	Doctor ZeDoc		-100.00 \$
<input checked="" type="checkbox"/>	1/06/01	Salary		5 000.00 \$
<input checked="" type="checkbox"/>	19/06/01	Theater		-200.00 \$
<input checked="" type="checkbox"/>	1/07/01	Home payment		-4 000.00 \$
<input checked="" type="checkbox"/>	12/07/01	Mobile phone		-450.00 \$
<input checked="" type="checkbox"/>	15/07/01	Salary		5 000.00 \$
<input checked="" type="checkbox"/>	16/07/01	Chinese restaurant		-200.00 \$
<input checked="" type="checkbox"/>	1/08/01	Salary		5 000.00 \$
<input checked="" type="checkbox"/>	1/09/01	Salary		5 000.00 \$

23 transactions displayed • Sum: 58 140.00 \$

Hold-Up has a very simple interface: it's a unique window where you can see what matters at a glance.

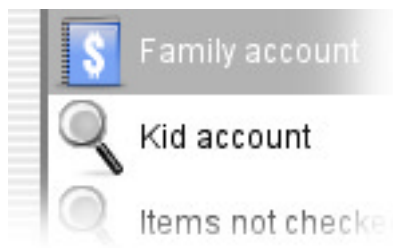

## Hold-Up interface (follow-up)

Click on the red button to quit Hold-Up.  
Use the green button to make the window full-screen or restore the window's previous size.

Window resize corner: click on it and leave the button down while moving the mouse to resize the window.

The left list displays the accounts and filters (see pages 8 and 13).

Select an account to display all its operations in the right list; select a filter and the right list will only display the transactions related to this filter (according to a date range, payment type, etc...).

If an account is selected, the display indicates the bank name and account number and the account balance. Click on the display to switch between the balance types: current (balance until today), future (balance including future transactions) and reconciled (balance considering only reconciled transactions).

If a filter is selected, then its name and description are displayed.

## Hold-Up interface (follow-up)

	Date	Description
<input checked="" type="checkbox"/>	1/01/01	Home insurance
<input checked="" type="checkbox"/>	1/01/01	Home payment
<input checked="" type="checkbox"/>	1/01/01	Salary
<input checked="" type="checkbox"/>	1/02/01	Salary
<input checked="" type="checkbox"/>	5/02/01	 Shopping
<input checked="" type="checkbox"/>	1/03/01	Salary
<input checked="" type="checkbox"/>	24/03/01	Turkish restaurant

You can sort the transaction list by date, name, amount, etc... by clicking on the column header (press the [Option] key at the same time to reverse the sorting order).

Description		Category
Home insurance		
Home payment		
Salary		
Salary		
 Shopping		

To resize the columns:

- 1) move the mouse cursor between two columns (the cursor changes),
- 2) then click and move the mouse.

	Date	Description
<input checked="" type="checkbox"/>	1/01/01	Home insurance
<input checked="" type="checkbox"/>	1/01/01	Home payment
<input checked="" type="checkbox"/>	1/01/01	Salary
<input checked="" type="checkbox"/>	1/02/01	Salary
<input checked="" type="checkbox"/>	5/02/01	 Shopping

To move a column:

- 1) click on its header and keep the button down until the cursor changes into the hand cursor,
- 2) then drag the mouse.

Use the «Display» menu to show or hide the account / filter list or some columns of the transaction list.

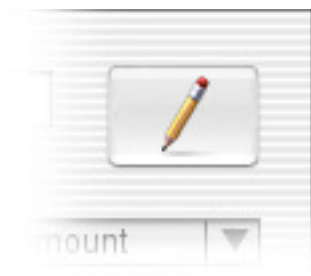

Note that the «Balance» column is displayed only if an account is selected and the «Account» column only if a filter is selected.

## Hold-Up interface (follow-up)

Use the search field to find quickly one or several transactions: just type the first characters of the name, amount, category name... and Hold-Up filters dynamically the transactions to keep only the ones matching the criterion.

The window button is a shortcut for common functions.

Its function depends on the context: it can create a transaction (pen icon), print (printer icon) or create an account (book icon).

01	Salary		
01	Salary		
23 transactions displayed • Sum: 58 140.00 \$			

The information area displays the number and sum of all the visible transactions in the window: this is not the account balance!

Salary		5 000.00 \$	
Salary		5 000.00 \$	
played • Sum: (+) 70 000.00 \$ (-) 11 860.00 \$ (=) 58 140.00 \$			

If you wish, the information area can display the detailed sums: positive transactions, negative transactions and total (see page 17).

## Creating and protecting accounts

### Note :

The Basic version of Hold-Up can only create one account.

### Creating an account :

Select «New account...» in the «File» menu. You need to enter the currency name and symbol that will be used for the transactions of this account.

Optionally, you may enter detailed account information: account number, bank address, contacts...

### Editing the account information :

To read or edit the account information, double-click on its name in the list.

### Protecting an account :

To protect the access to your account, choose «Set password...» in the «Account» menu, then enter a password.

The next times you launch Hold-Up, your account will remain unreadable until you unlock it. To do this, click on it and enter the password in the dialog box that appears.

To remove the protection, once the account is unlocked, choose again «Set password...» and clear the password text field.

### Deleting an account :

To delete an account, select it, then choose «Delete account...» in the «File» menu. An alert will ask you to confirm in order to prevent unwanted actions.

## Creating and editing transactions

### Creating transactions :

To create a new transaction in the current account, choose «New transaction...» in the «Account» menu.

To avoid entering again and again the same transaction descriptions, Hold-Up remembers the last ones you entered: you just need to enter the first characters.

A screenshot of a transaction entry form. It features a label 'Amount:' followed by a text input field containing '10.00'. To the right of the field is a button with a lightning bolt icon. Further right is a checkbox labeled 'Expense', which is currently checked.

To create an «expense» type transaction, enter a negative amount, or enter a positive amount and check the «Expense» checkbox. To create an «income» type transaction, enter a positive amount and leave the «Expense» checkbox unchecked. Use the button on the right of the «Amount» field to apply a currency conversion rate to its content (see page 19).

A screenshot of a 'Note' field. The word 'Note' is at the top left. Below it, a text area contains the text 'this is a note' on the first line and 'on two lines' on the second line. A small red icon is visible at the end of the first line.

In the «Note» field, use the [Enter] key to insert a new line.

To see immediately the note when in the transaction list, move the mouse cursor over the note icon, located on the transaction line.

To create several transactions in a row without opening and closing the dialog box, press the [Option] key while you click on the «OK» button.

### Editing transactions :

To edit an existing transaction, double-click on it in the transaction list.

### Deleting transactions :

To delete a transaction, select it in the transaction list then press the [Backspace] key. An alert will ask you to confirm your decision.

## Editing multiple transactions

### Note :

Multiple transactions edition is only available in the Pro version of Hold-Up.

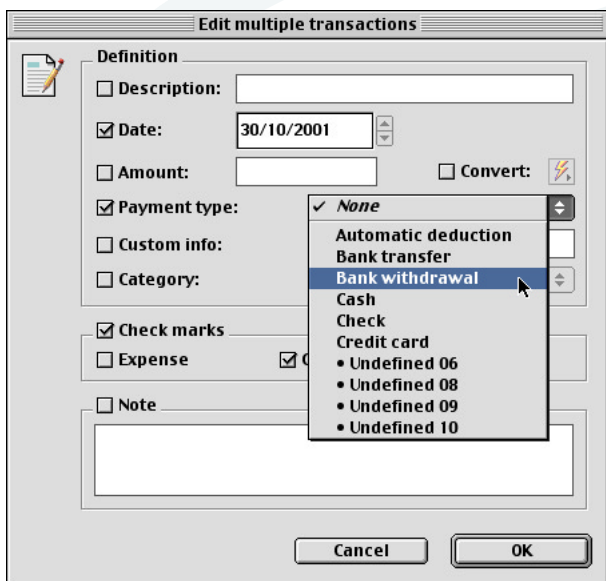

### Selecting multiple transactions :

To select a group of transactions, click on the first and last ones while pressing the [Shift] key.

To select discontinuous transactions, click on their lines while pressing the [Command] key.

### Editing multiple transactions :

Multiple edition allows you to change some parameters of all the selected transactions at once, instead of editing them one by one.

Choose «Edit multiple transactions...» in the «Account» menu. In the dialog box that appears, check the parameters you wish to change and enter their new values. Then click on «OK».

Use the «Convert» option to apply a currency conversion rate to the selected transactions (see page 19).

## Scheduling transactions

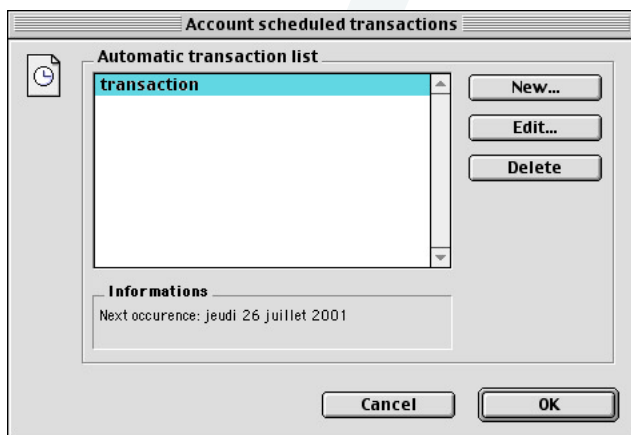

### Note :

Scheduled transactions are only available in the Pro version of Hold-Up.

### Managing scheduled transactions :

Use scheduled transactions instead of entering manually redundant transactions e.g. salary, rent payment, loan... The related transactions are automatically created in the account at the correct date. You can create an unlimited number of scheduled transactions.

Select an account, then choose «Scheduled transactions...» in the «Account» menu.

The dialog box that appears allows you to manage the scheduled transactions of this account.

### Deleting scheduled transaction :

To remove an existing scheduled transaction, select it, then click on «Delete».

## Scheduling transactions (follow-up)

### Creating and editing scheduled transactions :

To create a scheduled transaction, click on «New». To edit an existing one, select it in the list and click on «Edit...».

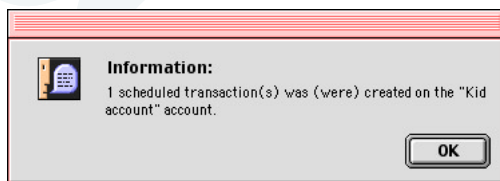

A screenshot of the 'Scheduled transaction' dialog box. The dialog has a title bar 'Scheduled transaction' and a clock icon. It is divided into two main sections: 'Schedule' and 'Duration'. In the 'Schedule' section, 'Next occurrence' is set to '26/07/2001'. 'Repeat every' is set to '1' with a dropdown menu open showing options: 'day(s)', '✓ week(s)', 'month(s)', and 'day(s) before'. 'Create transaction' is set to '0'. In the 'Duration' section, 'Expiration date' is set to '26/07/2001' and 'Occurrence count' is set to '1'. At the bottom are three buttons: 'Transaction...', 'Cancel', and 'OK'.

You have to define the schedule and the duration.

You also need to define the parameters of the transactions that will be created: click on the «Transaction...» button to display the usual transaction edition dialog (see page 9).

### Transaction creation :

At the given date, Hold-Up will create a new transaction in the account and will inform you by displaying a message window like this one:

### Scheduled transaction expiration :

When the scheduled transaction has expired, Hold-Up will ask you if you want to delete it or keep it to use it again later.

## Creating filters

### Note :

You cannot create more than 5 filters in the Basic version of Hold-Up .

### How filters work :

This is definitely the most powerful Hold-up feature: filters are a kind of “virtual accounts” that appear in the account list and which display a selection of transactions extracted from one or several accounts.

The selection may be done according to the transaction type, its date range, its amount range, its payment type...

To take a simple example, you can create a filter that displays only the transactions of the current month. But you can do much better e.g. display only the checked transactions of the current month which are in the «Food» category.

Filter possibilities are limitless.

### Creating a filter :

Choose «New filter...» in the «File» menu. You need to enter the filter name and its description if you wish to.

A screenshot of the 'Filter information' dialog box. It has two tabs: 'General' and 'Criteria'. The 'Criteria' tab is selected. Under 'Characteristics', there is a 'Name:' field with a dropdown menu showing 'All'. Below it is a 'Target account:' field with a dropdown menu showing 'Family account' (selected) and 'Kid account'. Under 'Description', there is a text field containing 'Display all unchecked transactions.'

Filters can apply to a given account or to all accounts at the same time. In the second case, you can for example, see at a glance all the transactions in a given category and from all accounts.

## Creating filters (follow-up)

### Filter criteria :

The filter will select transactions to be displayed using a given set of criteria. Check the criteria to activate and define their values.

The screenshot shows the 'Filter information' dialog box with the 'Criteria' tab selected. The 'General' tab is also visible. The 'Criteria' tab contains several sections with checkboxes and input fields:

- Checkmarks:** ☒ Expense, ☐ Reconciled, ☒ Warning
- Category:** ☒ Must be:
- Payment type:** ☒ Must be:
- Absolute amount:** ☒ Minimum:  Maximum:
- Date:** ☒ Only:   
☐ Range: from:  to:

At the bottom are 'Cancel' and 'OK' buttons.

About the «Checkmarks» criterion, three states exist for each checkbox: «checked» (the checkmark must be on), «unchecked» (the checkmark must be off) and «half-checked» (the checkmark may be on or off).

For example, to filter transactions with the «Warning» checkmark, activate the «Checkmarks» criteria, then set the «Expense» and «Reconciled» checkboxes to «half-checked», and the «Warning» checkbox to unchecked. To see the transactions with only the checkmark «Reconciled» on, set the «Reconciled» checkbox to «checked» and the other checkboxes to «unchecked».

You may use positive or negative values with the «Absolute amount» criteria.

### Deleting a filter :

To delete a filter, select it, then choose «Delete filter...» in the «File» menu. An alert will ask you to confirm to prevent unwanted actions.

## Printing

### Page setup :

Before you print for the first time, you should choose «Page setup...» in the «File» menu and configure your printer.

### Transaction list printing :

Choose «Print...» in the «File» menu to print the transaction list as it appears on screen. As a consequence, if you want to print all the transactions of a given account, make sure this account is selected (and not a filter) and the search field is empty. The transaction list will be printed using the same sorting and order as on screen, and the same set of columns will be visible.

Current balance: 33 140.00 \$

Future balance: 33 140.00 \$

	Date	Description
✓	1/01/01	Home insurance
✓	1/01/01	Home payment
✓	1/01/01	Salary
✓	1/02/01	Salary
✓	5/02/01	Shopping
✓	1/03/01	Salary
✓	21/03/01	Turkish restaurant

The column and transaction layout on the page (column order and width, number of transactions per page...) is completely automatic and cannot be edited. However you can choose the font and font size used to display the transactions (see page 18).

## Importing and exporting transactions

### Note :

Transactions export is available only in the Pro version of Hold-Up.

### Importing transactions :

Hold-Up is able to import transactions from a tabulated text file or a Quicken™ QIF text file into the selected account.

Choose «Import transactions...» in the «Account» menu and select the file. Hold-Up detects the file format automatically and displays a dialog box with related importing options.

The imported transactions will be automatically selected so you can do a multiple edition on them (see page 10).

### Importing from a tabulated text file :

The import options allow you to specify how the text file is formatted.

A screenshot of a dialog box titled "Tabulated text import options". It contains several settings for importing a text file. The "Decimal part separator" is set to a period (.). The "First line" is set to 2. The "Date column number" is set to 1. The "Description column number" is set to 2. The "Income column number" is set to 3. The "Expense column number" is set to 4. The "Custom info column number" is set to 5. There is a checkbox for "US style formatted dates (mm/dd/yy)" which is currently unchecked. At the bottom, there is a text box with the instruction "Read the users manual for more information." and two buttons: "Cancel" and "OK".

Tab text file format	
Decimal part separator:	.
First line:	2
Date column number:	1
Description column number:	2
Income column number:	3
Expense column number:	4
Custom info column number:	5
<input type="checkbox"/> US style formatted dates (mm/dd/yy)	
Read the users manual for more information.	

Column and line numbers start at 1.

If the text file does not contain any column with custom info, enter «0».

If the text file uses the same column for income and expense, simply enter its number twice.

Also indicate how the dates are formatted (US or European style).

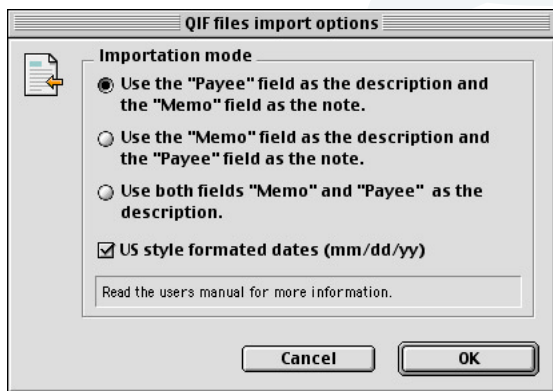

## Importing and exporting transactions (follow-up)

### Importing from a Quicken™ QIF file :

The import options allow you to specify how to decode the QIF file.

You first need to define which field should be used as the transaction description. If you choose «Use both fields Memo and Payee as the description», the content of these two fields will be merged.

You also need to indicate how the dates are formatted (US or European style).

Note that the sections "Investment account transactions", "Category list", "Class list", "Account list" and "Memorized transaction list" are not imported, and so are the transaction splits.

If categories are assigned to transactions in the QIF file, this assignments will remain only if categories with the same name exist in Hold-Up (see page 18).

Many QIF files do not respect the «official» file format. As a consequence, Hold-Up may not be able to import correctly the data. In such an event, contact the authors of Hold-Up.

### Exporting transactions :

Hold-Up can export the transaction list as a tabulated text file or as a Quicken™ QIF text file so you can import them later in another software e.g. a spreadsheet if you want to draw graphics.

To export the transaction list as it appears on screen, choose «Export transaction list...» in the «Account» menu and indicate where to save the file and select the text file format (under MacOS 8.5 and 8.6, the transactions are exported by default in a tabulated text file - to export as a QIF file, press the [Option] key while choosing the menu command).

Note that all the columns, including the ones not visible, will be exported.

## Preferences

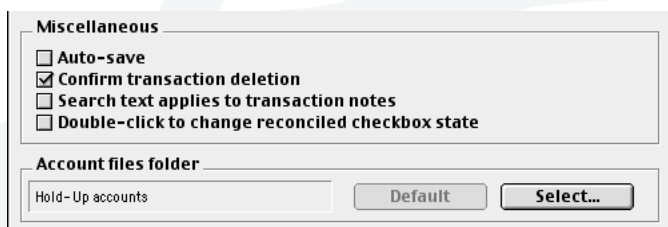

### Setting preferences :

Choose «Preferences...» in the «Edit» menu (MacOS 8 or 9) or in the «Hold-Up» (MacOS X).

### “General” pane :

In the «General» pane, you can choose the skin for the main window and edit various options.

If the «Search text applies to transaction notes» option is checked, the text entered in the search field will also be searched into the transaction notes (as in the category, description...).

By default, Hold-Up account and filter files are saved in a «Hold-Up accounts» folder inside your «Documents» folder. Click on «Select...» if you want to save the files into another folder.

### “Transactions” pane :

In this pane, you can edit the display and printing settings for the transaction list.

If you check the «Income and expense columns» option, the «Amount» column will be replaced by two columns: «Income» and «Expense».

## Preferences (follow-up)

### “Payments” and “Categories” panes :

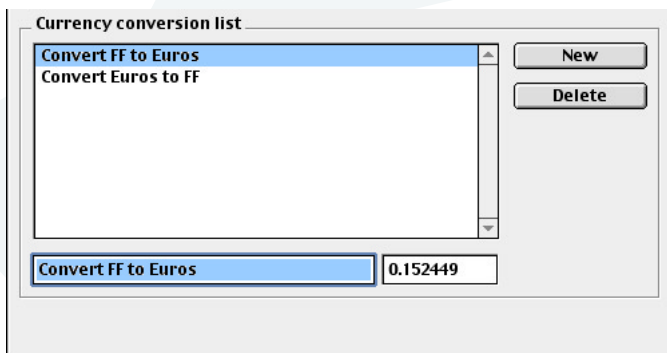

Use these two panes to edit the payment type and category list that appears in the various transaction edition dialogs.

To modify a label, click on it in the list and just enter a new name. You cannot delete labels or create new ones.

When editing categories, you can change their colors by clicking on the «Color...» button.

### “Conversions” pane:

In this pane, you edit the currency conversion list that you can use in the dialog boxes for transaction edition.

To edit a currency conversion rate and its name, click on it in the list and just enter the new rate or name. Use the «New» and «Delete» buttons to add or remove conversion rates.

Conversion rates have a maximal precision of 6 decimal digits.
